> ***Goal:*** *To sound like a real person, not a robot. This guide gives you copy-and-paste templates for common questions, written in a natural, conversational style based on your resume.*

The Core Principles of Sounding Human

- **Use Contractions:** Say "I'm" instead of "I am," "it's" instead of "it is." It immediately makes you sound more natural.
- **Write in Short Paragraphs:** No one likes reading a wall of text. Break up your thoughts into 2-3 sentence paragraphs.
- **Use Simple Language:** Avoid overly formal or jargon-heavy words. Write like you talk.
- **Show, Don't Just Tell:** Instead of saying "I'm a great problem-solver," tell a quick story about a problem you solved.
- **Be Specific, but Brief:** Use real numbers and results from your resume, but don't write a novel.

Template 1: The "Tell Me About Yourself" Response

This is for job interviews or initial client meetings. The goal is to give a concise, compelling overview of who you are and what you do.

The AI-Sounding Version (What to Avoid):

> *"I am a dynamic and results-oriented Business Systems Analyst with over five years of experience in driving digital transformation through expert-level CRM and ERP implementations. I possess a proven track record of spearheading cross-functional initiatives, optimizing contract lifecycle management, and championing Agile methodologies to enhance operational efficiency and accelerate revenue growth."*

Your Human-Sounding Version (Use This):

> *"Sure! I'm basically a problem-solver who bridges the gap between business needs and technology.*
>
> *For the past five years, I've been working as a Business Systems Analyst, mostly focused on making Salesforce and other CRM/ERP systems work better for the*

> *teams using them. I love digging into a company's process, finding the bottlenecks, and then using technology to smooth things out.*
>
> *At my last role with Insight, for example, I led a project to automate our contract renewal process. It was a bit of a mess, but we ended up cutting the manual work in half and boosting our renewal rate by 25%. I really enjoy getting those kinds of tangible results.*
>
> *My main strengths are in Salesforce optimization, process automation, and leading Agile projects. I'm really passionate about making tech user-friendly and impactful."*

Why it works: It's conversational, tells a mini-story with a real result, and clearly states your key skills without sounding like a corporate buzzword generator.

Template 2: The LinkedIn / Freelance Profile "About" Section

This is for platforms like LinkedIn, Upwork, or Braintrust. It needs to be a bit more direct and keyword-friendly, but still sound authentic.

The AI-Sounding Version (What to Avoid):

> *"As a seasoned Business Systems Analyst, I specialize in the strategic optimization of Salesforce CRM and ERP systems. My core competencies include business process re-engineering, Agile project management, and stakeholder engagement. I am dedicated to delivering innovative technology solutions that drive business value and foster user adoption."*

Your Human-Sounding Version (Use This):

> *"Hey there! I help companies get the most out of their technology, especially Salesforce.*
>
> *If you have a CRM that isn't quite living up to its promise, or a manual process that's slowing your team down, I'm the person you call. I come in, figure out what's not working, and then design and implement a solution that actually makes a difference.*
>
> *A few things I'm really good at:*
>
> - ***Salesforce Optimization:*** *I've managed company-wide migrations and built custom roadmaps that increased user adoption by over 35%.*

> - ***Process Automation:*** *I love finding ways to automate tedious work. I recently automated a contract renewal workflow that cut processing time by 30% and reduced manual effort by half.*
> - ***Agile Project Management:*** *I keep projects on track and make sure we're delivering value quickly, often reducing release timelines by 25%.*
>
> *I'm comfortable leading projects, gathering requirements from stakeholders, and working with technical teams to get things built. My goal is always the same: make the technology work for the people, not the other way around.*
>
> *If you're looking for someone to help streamline your operations and boost your team's efficiency, let's chat!"*

Why it works: It starts with a friendly greeting, speaks directly to the reader's problems ("If you have a CRM that isn't working…"), and uses a few bullet points to make the key skills scannable, but frames them with real-world context.

Template 3: The Networking / Cold Outreach Email

This is for reaching out to potential clients or contacts on LinkedIn. The goal is to be brief, direct, and value-focused.

The AI-Sounding Version (What to Avoid):

> *"Dear [Name],*
>
> *I am writing to introduce myself as a highly skilled Business Systems Analyst with expertise in Salesforce optimization. I have identified your company as a leader in the [Industry] sector and I am confident that my services could be of significant value to your organization. I would be grateful for the opportunity to discuss your business needs and how I might be of assistance.*
>
> *Sincerely, Kristen Blanks"*

Your Human-Sounding Version (Use This):

> ***Subject:*** *Quick question about your sales process*
>
> *Hi [Name],*
>
> *Hope you're having a good week.*

> *I was looking at [Company Name]'s website and saw you're hiring for a few sales roles. That kind of growth is great to see, but it can often put a strain on a company's internal systems, especially Salesforce.*
>
> *I specialize in helping fast-growing companies like yours optimize their Salesforce setup to handle that scale without the headaches. I recently helped a similar company automate their workflows, which cut their contract processing time by 30%.*
>
> *If you're running into any of those growing pains, I'd be happy to share a few quick ideas. No sales pitch, just some thoughts from someone who's been in the trenches with this stuff.*
>
> *Would you be open to a brief chat next week?*
>
> *Best, Kristen*

Why it works: The subject line is casual and intriguing. It shows you've done a tiny bit of research ("saw you're hiring"). It connects their situation (growth) to a common problem (system strain). It offers value ("share a few quick ideas") instead of just asking for a meeting. It's low-pressure and feels like a genuine attempt to help.

How to Use These Templates

1. **Copy and Paste:** Start with these templates as your base.
2. **Customize:** Tweak the details to fit the specific job, company, or person you're talking to. Change the specific metric or project you mention.
3. **Read it Aloud:** Before you hit send, read your message out loud. If it sounds clunky or unnatural, simplify it.

By following these principles and using these templates, your communication will feel authentic, confident, and much more effective.
