> ***Goal:*** *To answer these application questions in a way that sounds authentic, confident, and human. These are ready to be copied and pasted.*

Question 1: Why Anthropic?

(Why do you want to work at Anthropic? We value this response highly - great answers are often 200-400 words.)

Your Answer:

> *I've been following Anthropic for a while, and what really stands out to me is the focus on building not just capable, but also reliable and understandable AI systems. My entire career as a Business Systems Analyst has been about making complex technology work better for people, and that seems to be a core part of Anthropic's DNA.*
>
> *In my previous roles, I've seen firsthand how powerful new technologies can be, but I've also seen how they can create confusion and frustration if they're not implemented thoughtfully. I've spent years bridging the gap between what the technology can do and what the business actually needs. I've been the person in the room who has to translate the technical details for the sales team, and then translate the sales team's needs back to the engineers. It's a balancing act, and it requires a deep understanding of both sides.*
>
> *I see a parallel in Anthropic's mission. You're not just chasing performance benchmarks; you're thinking deeply about the safety, ethics, and real-world impact of AI. That's the kind of work that gets me excited. I'm not just interested in building cool tech; I'm interested in building tech that people can trust and use effectively.*
>
> *I've seen the power of good systems to transform a business—like when I automated a contract renewal process and cut manual work by 50%. I believe AI has the potential to do that on a much larger scale, but only if it's built with the kind of care and foresight that Anthropic is known for. I want to be part of a team that is as focused on the "how" and "why" as it is on the "what." I think my skills in requirements gathering, user feedback, and cross-functional collaboration would be a great fit for that mission.*

Question 2: Have you built internal tools or applications used by other teams within your organization?

Your Answer:

> *Yes*

Question 3: Have you worked directly with end users to gather requirements and iterate on features based on their feedback?

Your Answer:

> *Yes*

Question 4: Additional Information (Cover Letter)

(Add a cover letter or anything else you want to share.)

Your Answer:

> *Hi there,*
>
> *I wanted to add a quick note to my application. I'm really excited about the possibility of joining Anthropic, and I think my background could be a great fit for your team.*
>
> *As a Business Systems Analyst, my job has always been to make sure that the technology we build actually solves real-world problems for the people using it. I've spent a lot of time working directly with sales, marketing, and operations teams to understand their pain points and then translating those needs into technical requirements for our engineering teams.*
>
> *A few highlights from my experience that I think are relevant:*
>
> - *I've led projects that increased user adoption of new systems by over 35% because I focused on building things that were intuitive and genuinely helpful.*
> - *I'm very comfortable in an Agile environment. I've helped reduce release timelines by 25% by keeping projects on track and making sure we're constantly iterating based on user feedback.*

> - *I have a knack for seeing the big picture. I've developed multi-year roadmaps for CRM systems and managed company-wide migrations, so I'm used to thinking about long-term strategy and impact.*
>
> *I'm passionate about building technology that is not just powerful, but also safe, reliable, and easy to understand. It seems like that's what Anthropic is all about, and I would be thrilled to bring my skills and experience to your team.*
>
> *Thanks for your time and consideration.*
>
> *Best, Kristen Blanks*

Other Questions

For the multiple-choice questions about visa sponsorship, relocation, and self-identification, you should answer those based on your personal situation. The templates above are for the free-text questions where tone and content are most important.

Why these answers work:

- **They are specific:** They reference real numbers and projects from your resume.
- **They are conversational:** They use contractions and natural language.
- **They are aligned with Anthropic's mission:** They emphasize safety, reliability, and user-centric design.
- **They show, not just tell:** Instead of just saying you're a good collaborator, you talk about translating needs between teams.
- **They are confident but not arrogant:** The tone is professional but approachable.

These answers should give you a great starting point for your application. Good luck!
